MANITOBA ECONOMIC ACCOUNTS
BACKGROUND NOTES

I. INTRODUCTION:

The Manitoba Bureau of Statistics has developed a detailed set of Economic Accounts for Manitoba. The first three of four phases of the project have been completed. MBS is currently working on Phase Four and has to date produced a quarterly income series for personal income and will shortly be releasing a quarterly GDP series. Work on a "crown" sector has not yet commenced.

PHASE	DATA OUTPUT
1	Consolidated Income Personal Sector Government Sector GDP by Industry (annual - current dollars)
2	Consolidated Expenditure (annual - current dollars)
3	Consolidated Expenditure (annual - 1971 constant dollars)
4	Quarterly Series (selected series) Crown Sector

The annual accounts will be produced twice each year. In March or April, the preliminary estimates for the previous calendar year will be released. In September or October, the final estimates will be released and revisions will be made to the last three years of data. For example, preliminary estimates for 1984 were released in April of 1985, and final estimates, including revisions to the years 1981 - 1983, were produced in October of 1985.

Quarterly estimates will be released within thirty days or less of the publication of Statistics Canada's Quarterly National Income and Expenditure Accounts.

Provincial Economic Accounts are subject to limitations because of problems of an informational and conceptual nature. These problems determine that the numbers published should be treated as estimates rather than actual values. They further mean that the accounts are subject to methodological revisions as better solutions to problems are developed.

II. OVERVIEW OF ECONOMIC ACCOUNTS:

Provincial Economic Accounts seek to measure the value of all final goods and services produced by the provincial economy in a given period of time. They are grounded in macro economic theory and provide a systematic description of the economy in one comprehensive and interrelated statistical system.

The accounts measure the performance of the provincial economy by means of a balancing set of accounts, similar to the annual profit and loss statement of a business enterprise. They provide a basic statistical picture of the key economic processes of production, income generation, sales to major markets, consumption and capital formation.

The Manitoba Provincial Economic Accounts employ a conceptual framework similar to that recommended by the United Nations and adopted by Statistics Canada in its Canadian System of National Accounts. This allows for interprovincial, national and international comparisons of economic performance.

III. ECONOMIC ACCOUNT USES:

Economic Accounts have many applications which include:

(1) Current Economic Analysis

The accounts facilitate the evaluation of the current performance of the Manitoba economy and allow comparisons with other jurisdictions.

(2) Analysis of Structural Changes

The accounts permit comparison of changes in factor shares, industrial shares, and other indicators of fundamental structural change in the economy over time.

(3) Analysis of Sectoral and/or Industrial Performance

Provincial Economic Accounts make it possible to assess the relative importance and the relative performance of a particular sector or industry in the economy.

(4) Productivity Analysis

Using Gross Domestic Product by Industry from the Economic Accounts, it is possible to estimate the productivity of labour for each industry, in terms of output per worker. Productivity analysis is useful in determining industrial trends, competitiveness and in other applications.

(5) Model Building

The accounts provide the conceptual framework and required inputs to permit the construction of short and medium term forecasting models. These models can be used to "predict" economic performance and "simulate" the probable effects of proposed tax changes, etc., on future aggregate economic performance.

(6) Background to the Budget

The accounts provide a description of key economic activity which can provide background information for the budget.

IV. SOME KEY CONCEPTS:

(1) Defining Production

Total Production of the province may be defined in two ways:

(a) Gross Provincial Product (GPP) is the value of production of goods and services attributable to residents of the province regardless of the location of production.

(b) Gross Domestic Product (GDP) is the value of production of goods and services within the geographical boundaries of the province regardless of whether the production is owned by residents of the province.

In short, GPP is concerned with "ownership", while GDP is concerned with "location" of production. The Bureau has adopted GDP as its measure of production for the Manitoba Economic Accounts.

(2) Different Methods of Measuring Production

There are three different ways to measure production. They are the income, final expenditures or net value added (gross output less purchased inputs) by industry.

The Manitoba Economic Accounts will use the first two methods, income and expenditures.

In addition, there will be an industrial distribution of the income account which will yield GDP by industry.

(3) Different Methods of Valuing Production

There are three different methods used to value production:

(a) At Current Market Prices where production is valued at the market price paid by final users. This is the method of valuation used in the Consolidated Income and Expenditure Accounts.

(b) At Factor Cost where production is valued in terms of the costs of the factor or production (land, labour, capital and entrepreneurship). It differs from valuation at market price because it does not include indirect taxes less subsidies or the residual error (all of which are not factor costs but are included in market price).

(c) At Constant Prices where production is valued in terms of a given base year to reflect "real" or non-price changes in output. Measured in constant price GDP reflects the volume as opposed to value of output. There are two measures of real output. The first is real GNE which is the Consolidated Expenditure Account deflated. The second is Real Domestic Product (RDP) which is the net value added by industry approach deflated.

(4) Sector Accounts

The Economic Accounts consist of four sector accounts: (1) persons; (2) governments; (3) business; and (4) non-residents.

The sector accounts contain records of both requited and unrequited transactions among sectors. Requited transactions are those in which a two-way exchange (e.g., goods and services for currency) takes place, while unrequited transactions (e.g., family allowances, other transfer payments, etc.) involve no tangible exchange. In an economic accounting sense, unrequited transactions are redistributive as opposed to productive. They are included in the sector accounts to provide a complete picture of the current income and expenditures of sectors, but are omitted in the consolidated tables to avoid duplication in the estimates of production.

V. WHAT ECONOMIC ACCOUNTS DO NOT MEASURE:

Economic Accounts do not measure social welfare. They are centered around market-based activity, and they follow clearly defined market-based criteria. They take no account of social costs or "negative externalities" such as air and water pollution, or problems resulting from crime, urban crowding, etc. In this specific sense, they cannot measure changes in welfare.
